<p><i>Project scope schedule & realizable value</i></p>	<p>To implement the proposed scientific-and-technological development up to the commercial exploitation phase, a 4 to 6 months-long project time frame may be required (provided that no general construction activities are carried out).</p> <p>Sci-tech products value: 150.000.00 USD , plus 10,000.00 USD for scientific backing documentation, plus payment for business travelling expenses (3 experts) as of the date of start-up & installation supervision; the special-purpose equipment value may, as agreed by the Client and our company (the value may be predetermined subject to the capacity, manufacturing method and complete set), amount from 35,000 USD. .</p>
<p>Additional info</p>	<p>The equipment for capsule production may consist of 4 main machines.</p> <ol style="list-style-type: none"> 1. Capsulator 2. Vibro-separator plus (washing machine) 3. Gas-lift 4. Centrifuge <p>The required area for such machines is 30 sq. m. The sufficient area of the production department is 60 sq. m. The manufacturing process (provided that the working capacity is 100 kg per hour) may be served by 2 to 3 operators.</p>
<p>Additional info</p>	<p>We can provide those being interested in the matter with relevant tasting samples. Also, an initial consultation by our experts/technologist may be possible (if needed).</p> <p>Once a decision has been reached concerning the project implementation and a contract of intents has been concluded, your experts will have the opportunity to examine the equipment 'at work' followed by the in-site product tasting. Furthermore, our experts will answer all your questions.</p>
